

DYNAbill

DYNAbill is a newly developed 'simple to use' WEB based tenant billing software, perfect for organisations who have a need to accurately distribute utility costs. DYNAbill is the ideal tool for individuals who own or manage multiple properties and have the need to bill tenants. The software is also designed for the precise apportion of utility costs within organisations.

WEB-BASED

DYNAbill is a WEB based software, as a user you will have your own log on details and have the convenience of logging from anywhere with Internet connection available.

TAILORED TO YOUR OWN ORGANISATION

DYNAbill enables the user to incorporate their own logo and relevant details such as payment information etc onto the tenant's bills.

PART CYCLE BILLS

DYNAbill enables the user to create 'Part Cycle Bills' to cope with circumstances such as a tenant moving in or out of premises mid month.

ADDITIONAL INFORMATION

Detailed information about landlords, tenants, premises and contracts can be stored within DYNAbill.

FINANCIAL MANAGEMENT

Various tariffs/ contracts can be set up within DYNAbill and linked to tenant and meter information in order to bill as required. The system has the ability to add contract charges to bills such as a monthly standing charges for system administration, M&E maintenance, sinking fund generation for plant replacement etc.

This software does not yet include features for handling the management of money but should it be a popular requirement, this function will be developed at a later date. This software can however be interfaced with existing financial accounts packages.

GENERATION OF BILLS

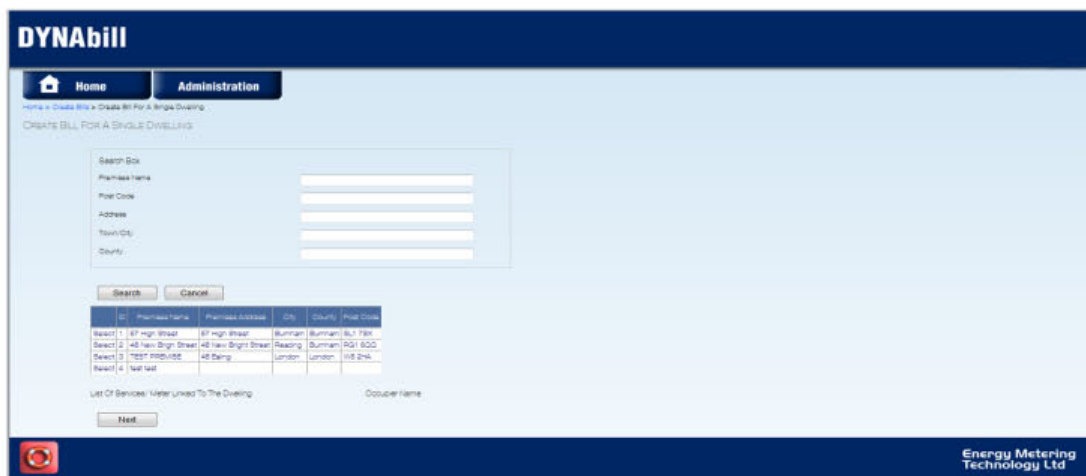

The bills are produced in a PDF format which means that they can either be printed and posted or issued electronically. The invoice frequency is monthly at present but other intervals can be arranged if required.

ARCHIVING FACILITY

This archiving facility means that historical bills are kept safely in case of any future requirement.

HOW IT WORKS

The user's logged data of meter readings is either collected automatically and sent via GPRS or collected manually by the user and then uploaded to DYNAbill database where it is linked to the tenant and relevant contract information and then used to calculate individual bills. Bills can be produced individually or in bulk.

AMR PROVISION

In order to use this software there is a need for AMR and sub-metering and EMT provide 'Turnkey Solutions' for this should it not already be in place within your organisation.

LEVELS OF SOPHISTICATION AND USER OPTIONS

There are various options available for this software, it is extremely flexible and can be adapted to individual requirements. Please get in touch with us to discuss your requirements.
